Java1: Lesson 10 – Lab Project

1. Add **summary** at the top, **documentation** at the bottom and **comments** where necessary.
   - Recordings and interviews are an exception, but they should be included in your submission code.
2. **Cite** the source of your information.
3. Refrain from including anything **you don't fully understand**.

2	100 points Update the BMI Calculator at https://liveexample.pearsoncmg.com/html/BMI.html to allow selection of the unit system (kilogram/meter or pound/inch), perform the following steps: 1. Use the proper conversion factor. 2. Add proper comments to the code. Use //* to indicate your modifications. 3. Show how to use the BMI class in your test code. → YouTube 4. Submit only one .java file. **Make sure that your implementation is different from the one provided.*	
	File(s) to submit	J110_1.java J110_1.png YouTube link
3	100 points Write a code to estimate Euler's number using the formula blow: $$e = 1 + \frac{1}{1!} + \frac{1}{2!} + \frac{1}{3!} + \ldots + \frac{1}{i!} = 2.71828182845 \ldots$$ a. Create an "Euler" class to calculate the value of e for i = 1, 2, 5, 10, 50, 100, 200 b. Record the steps writing up your **documentation** → YouTube c. Refer to https://www.mathsisfun.com/numbers/e-eulers-number.html for more information about Euler's number. d. The input should be the maximum value of i used in the summation. **Do not edit your recordings, as this is considered a form of cheating.*
